About Me

Aspiring Quality Engineer transitioning from a Software Engineering background, with a strong passion for software quality and reliability. Dedicated to building scalable automation frameworks and ensuring high-quality software delivery within Agile environments.

Skills

- Java
- Selenium WebDriver
- TestNG
- Cypress
- Jenkins
- Git
- CI/CD
- Cloud technologies
- API Testing (Postman, Swagger)

Programming Languages and Tools

- Programming: Java, JavaScript, Python
- Frameworks: ReactJS, NodeJS, ExpressJS
- Automation Tools: Selenium, TestNG, Cypress
- Build/CI: Jenkins, Git
- Databases: MySQL, MongoDB
- Cloud/OS: GCP, Azure, Linux, Oracle

Experience

Software Engineer Intern — Entgra (Nov 2024 – May 2025)

- Worked on backend API and service development, integrating testing with Postman and Swagger.
- Participated in Agile sprints and collaborated using Git.

Technologies and Tools: React, Java, Maven, Git, Linux, Swagger, Postman

Software Engineer (Volunteer) — AIESEC Sri Lanka (2024 – Present)

- Automated data migration and entry workflows using Selenium and Python.
- Deployed the signup portal to an Azure EC2 instance, ensuring reliability.
- Contributed to web projects with UTM tracking and data validation.

Technologies and Tools: React, Node JS, Selenium, Python, Azure, Clickup

Education

BSc (Hons) in Information Systems – University of Colombo School of Computing (2022– 2026)

CGPA: 3.42

G.C.E Advanced Level (2020): A - ICT, B - Mathematics, S - Physics | Z-score: 1.39

Anula Vidyalaya, Nugegoda

G.C.E Ordinary Level (2017): 9As

Anula Vidyalaya, Nugegoda

Projects

StayMate— Property Management System

- Implemented and tested technician module features
- validated workflows and job assignment logic.
- Conducted unit testing and API validation using Postman.

Technologies and Tools: React, Node.js, Express, MongoDB, Postman

Automated CI/CD Pipeline using GitHub Actions and GCP

- Designed and implemented a fully automated branch-based CI/CD pipeline for a Python web application using GitHub Actions.
- The CI workflow executes automated testing with Pytest on the development branch, builds a Docker image upon successful validation, and pushes it to a container registry.
- A conditional CD workflow is triggered only after successful CI completion, automatically deploying the verified build to a Google Cloud Compute Engine VM.

Technologies and Tools: GitHub Actions, Docker, Google Cloud Platform (Compute Engine), GitHub Packages, Python.

CI/CD Pipeline Setup with Jenkins and Apache Tomcat

- Configured and managed a Jenkins automation server on a Linux (WSL) environment to streamline application deployment.
- Created multiple Jenkins jobs for building, testing, and deploying a Java web application to an Apache Tomcat server.
- Integrated basic automated tests to validate application stability before deployment.

Technologies and Tools: Jenkins, Apache Tomcat, Linux (WSL), Java, Shell scripting, Git

Web Application Vulnerability Assessment (Authorized)

- Conducted ethical penetration testing of a web application in a controlled environment.

Technologies and Tools: Snyk, manual vulnerability scanning, web application testing, WSL

Selenium Automation framework (Ongoing)

- Automated end-to-end web application tests using Selenium WebDriver and TestNG, covering various test scenarios such as registration, login, product search, and cart functionality with a maintainable Page Object Model framework.

Technologies and Tools: Selenium WebDriver, IntelliJ IDE, TestNG, Google Chrome, Maven

Cypress Automation framework (Ongoing)

- Automated end-to-end and API testing of an e-commerce web app using Cypress, covering UI elements, product listings, filters, add-to-cart functionality, and backend API validations.

Technologies and Tools: Cypress, VS Code, JavaScript/ Node.js, Mocha

Cognitive distortion classification for Cognitive Behavioral Therapy (CBT) delivery with XAI Integration (Ongoing)

- Developing a Python-based model for classifying cognitive distortions into five categories, using XAI techniques (SHAP and LIME) to provide interpretable insights for clinicians as a CBT delivery aid.

Technologies and Tools: Python, scikit-learn, SHAP, LIME, pandas, NumPy, Jupyter Notebook.

Other Projects

- Job LinkUp – Job Portal (PHP MVC framework)
- Library Management System (Java)
- Personal Portfolio Site (React)

Volunteering

- IEEE WIE Student Branch Affinity Group Of UCSC
- AIESEC Sri Lanka
- AIESEC In University of Colombo
- ACM Student Chapter Of UCSC
